

This is where the user will select their pattern, also known as the Pattern Library. Select a pattern from the list and it will load the pattern into the Pattern Reader.

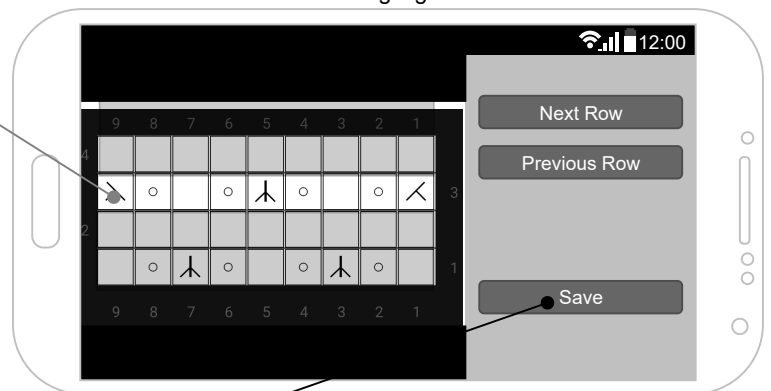

This floating button will lead the user to the Pattern Builder.

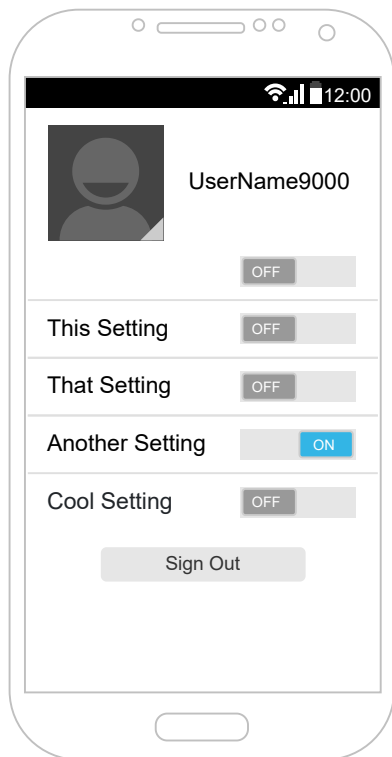

This is the Pattern Reader fragment. The row highlight will move up and automatically return to the pattern's first row for a fresh repeat of the pattern. In the event that a user needs to back up a row, the previous button will regress the row highlight.

This is the current row that the user is knitting. Below it is the previous row. Above it are the next rows.

Save your current spot in your knitting

This is the Settings fragment.
Reworking of the plan for this
fragment is in progress.

This text field will be a search bar. The user
will search for the stitch they need, select it
from a list, and then the resulting stitch will be
kept below it in a recently used 'palette'.

The user will select the stitch they need from the
palette and tap the place in the grid where it belongs
in the pattern. UI design still in progress.
